WHO URGES EQUITABLE COVID-19 VACCINE ACCESS TO WIDEN REACH IN AFRICA

NOT YET ARRIVED IN 10 COUNTRIES

PAris, Washington DC, Zanzibar, 25.03.2021, 18:59 Time

USPA NEWS - Africa urgently needs more COVID-19 vaccine supplies as deliveries begin to slow down and initial batches are nearly exhausted in some countries. The continent has so far administered 7.7 million vaccine doses mainly to high-risk population groups. In 10 African countries, vaccines have not yet arrived. WHO urges equitable COVID-19 vaccine access to widen reach in Africa

Africa urgently needs more COVID-19 vaccine supplies as deliveries begin to slow down and initial batches are nearly exhausted in some countries. The continent has so far administered 7.7 million vaccine doses mainly to high-risk population groups. Forty-four African countries have received vaccines through the COVAX Facility or through donations and bilateral agreements, and 32 of them have begun vaccinations.

"A slowdown in vaccine supply could prolong the painful journey to end this pandemic for millions of people in Africa, "? said Dr Matshidiso Moeti, the World Health Organization (WHO) Regional Director for Africa. "While some high-income countries are seeking to vaccinate their entire populations, many in Africa are struggling to sufficiently cover even their high-risk groups. Acquiring COVID-19 vaccines must not be a competition. Fair access will benefit all and not just some of us."?

However, COVID-19 vaccine demand is placing an enormous strain on the global manufacturing system which has an annual capacity of 3"5 billion vaccine doses. Up to 14 billion COVID-19 vaccines may be needed globally. To support manufacturers, WHO is urging greater global collaboration on supply chain issues, ensuring that manufacturers with excess supply can be linked to companies that have fill-and-finish capacity. The COVAX Facility is exploring ways of dose-sharing by high income countries that have surplus stocks to encourage the release of these vaccines even before countries finish vaccinating their own people. While it is encouraging that high-income countries have promised to do this these, commitments now need concrete action.

During the past four weeks deaths in Africa have dropped by 45% compared with the previous four weeks, but the case fatality rate for cumulative deaths for the continent is 2.7% which is still higher than the global cumulative case fatality rate of 2.2%. The WHO Regional Office for Africa held a virtual press conference today facilitated by APO Group during which Dr Richard Mihigo, the

Immunization and Vaccine Development Programme Coordinator at the Regional Office, briefed on vaccine rollout in Africa. He was joined by Dr Sabin Nsanzimana, Director General Rwanda Biomedical Centre, Professor Anthony Costello, Professor of Global Health and Sustainable Development, University College London, and Dr Georges Ki-Zerbo, WHO Representative in Guinea.
